DETAILED ACTION

1. Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claim is indefinite because the recitation in claim 2 that "an impedance matching circuit is provided to connect the output of said filter means with said input of said analog to digital converter" is contrary to the recitation in claim 1 that "an output of said filter means is directly connected to an input of said analog to digital converter"

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1,4,5 and 7 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Kim (2001/0006539 A1).

Art Unit: 2193

Kim discloses in figure 6 a radio signal receiver including a saw filter whose output is directly connected to an input of an analog to digital converter as claimed.

5. Claims 2 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kim (2001/0006539 A1) as applied to claims 1 above and further in view of Takahashi (6,121,859).

It is noted that Kim does not specifically disclose impedance matching circuits as claimed. However, Takahashi disclose in figure 2 a saw filter having input and output connecting to impedance matching circuits (6,8). It would have been obvious to a person of ordinary skill in the art to provide impedance matching circuits at the input and output of the saw filter in Kim as taught by Takahashi in order to prevent interelectrode break caused by application of static electricity (see Takahashi, Col. 1, lines 50-55.)

6. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kim (2001/0006539 A1).

It is further noted that Kim does not specifically discloses the analog to digital converter having a differential input as claimed. However, since analog to digital converters with differential input are well known in the art. It would have been obvious to a person of ordinary skill in the art to provide the analog to digital converter of Kim with a differential input in order to reduce noise.

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
